Salicylic acid removes corns fast - with as few as two treatments Cushioning provides relief from painful corns by protecting them from shoe pressure and friction

What is a corn?

A corn is caused by the buildup of hard, dead skin over an area of pressure or bony prominence.

The hard skin is composed of skin cells called keratinocytes, which are present throughout the entire epidermal layer of skin.

Do I have a corn?

You may have a corn if you have a small, round area of thickened skin over a toe joint.

What causes a corn?

Corns on the feet are often caused by friction and pressure from footwear as well as abnormal patterns of walking or repetitive activities (such as in sports).

Help Prevent Corns By:

Wearing properly fitted shoes with adequate arch support

Rotating your shoes on a daily basis

Reducing pressure and friction from footwear
